

The figure displays a 1000x1000 grid of plots, organized into 10 rows and 100 columns. Each plot shows a time axis (t) on the x-axis and a physical quantity on the y-axis. The quantities are labeled on the left and right sides of the grid. The plots exhibit a clear diagonal pattern of red and blue regions, indicating a wave-like propagation of information or a specific physical process. The colors represent different values or states of the system, with red often indicating higher values and blue indicating lower values. The overall structure suggests a complex, multi-scale physical process being simulated.
